## Continuation Sheet (PTOL-303)

Application No. 10/043,791

, Continuation of 2. NOTE: The deletion of the terms "and a cooler (20)" (line 4) and "cooler (20) of the" (line 8) in claim 8 changes the scope of the subject matter. Thereby, further consideration is required.

Gebhardt reference discloses the cold-start of a fuel cell system at low temperature, which would encompass the freezing temperature of

water. See paragraph 10.

The recitation of "thermal insulating means" in claim 1 lacks specific teaching as to what exactly constitutes the structure and function of the limitation. To the best of examiner's interpretation, the casing of the fuel cell system in Figure 2 of Acker reference is considered as a thermal insulating means, which helps prevent transfer of heat across the casing material. Similarly, the cathode outlet conduit (20), which connects the fuel cell stack with the climate control unit, can be construed as a thermal insulating means, because it can maintain the interior of the air space at a given temperature. See Column 5, Lines 41-62.
